██████████ | STATEMENT PERIOD
Jul 1 - Sep 30, 2021

If anything in your statement looks incorrect, please let us know immediately.

In case of error or questions about your electronic transfers, we can be reached by telephone at 1-888-464-0727, or mail at P.O. Box 60, St. Cloud, MN 56302. Or, log in to your account at capitalone.com and click on the transaction. If you think your statement or receipt is wrong or if you need more information about a transfer listed on your statement or receipt, you must let us know within 60 days after we sent you the FIRST statement on which the error appeared.

(1) Tell us your name and account number.

(2) Describe the error or the transfer you are unsure about, and provide an explanation of why you believe it is an error or why you need more information.

(3) Tell us the dollar amount of the suspected error.

We will investigate your complaint and will correct any error promptly. If we take more than 10 business days to do this, we will credit your account for the amount you think is in error, so that you will have the use of the money during the time it takes us to complete our investigation.

End Of Document

How is this DIRO document "Original"?

Original means a document of where the source is known and has not been tampered in any meaningful way. DIRO captures the true provenance of the document provided by the user and makes both the source and the document immutable. For all legal purposes the document is Original because its exact origin is known.

Can anyone use a fake website?

DIRO's technology uses multiple checks such as whitelisted domains, IP address, secure browsing environment, SSL certificate check, trace route etc to make sure that the page being captured is 100% authentic from the absolute original source.

How do I verify if the PDF is not tampered?

DIRO combines all the information, the true source including the SSL certificate, timestamp and the forensic data into a PDF. It then generates a checksum (HASH) of the PDF that makes it tamper proof. It then adds the HASH to a public blockchain, making it permanently immutable. Any third-party can calculate

the HASH of the PDF and verify it against the blockchain directly or using DIRO API.

Why can't anyone just edit the webpage before capture?

The browser used to capture the webpage or screenshot is protected and runs in a trusted execution environment. It has all editing functionality disabled so that a user may not be able to edit the page at any point.

What forensic traces and timestamps are used?

DIRO uses various forensic parameters to ensure the document is from the authentic source. The fraud checks include tracing the IP address, trace route, whitelisting the domains with SSL certificates, trusted execution environment, NTP synchronized time stamp of the screenshots and many other parameters to provide the [world's strongest Original Documents online](#).

Why capture IP and trace route?

The process uses multiple factors while checking the origin besides just DNS lookup, SSL certificate and the

whitelisting. DIRO captures the forensic record to detect sophisticated hacks and makes it immutable using a blockchain. The IP address and trace routes may help in case the original source on the far side is compromised. This will allow such documents to be revoked.

Can this be used as evidence in court or with regulators?

Yes, DIRO provides a provable, reportable and audit-able evidence that is immutable and 100% fraud proof. The whole process and document is end-to-end cryptographically verifiable and mathematically provable along with the original source. The technology has been "considered" by 3 of the G7 regulators and won multiple global awards. DIRO is part of UK FCA sandbox, it won top 10 emerging technologies from Indian regulator and also being used by regulated companies in US, UK and European countries. In fact to the contrary it is much harder to prove if a physical document is not tampered versus a document provided using DIRO technology.
